SUMMARY

Computer Science student with hands-on experience in software development, Android applications, blockchain, and data-driven solutions including machine learning and analytics. Built real-world projects such as desktop tools, mobile apps, and automation systems that demonstrate technical expertise, problem-solving ability, and tangible impact. A strong programmer with a solid coding foundation and a passion for creating innovative, user-focused technology, I aim to leverage my skills to deliver reliable and forward-thinking software solutions.

SKILLS

Languages: Python, C, C++, Java, Kotlin, R, SQL, Solidity
Tools/Platforms: Git, Android Studio, R Studio, Tableau, Advanced Excel, Data Analysis and Visualization, Predictive Analysis
Framework: Android SDK, DBMS, Scikit-learn, TensorFlow, NLTK, OpenCV, Pandas, NumPy
Soft Skills: Problem-Solving Skills, Project Management, Adaptability, Critical Thinking, Teamwork and Collaboration

PROJECTS

AI-Powered Emotion & Gesture-Based Content Recommender [\[link\]](#) Oct 2025 – Oct 2025

- Designed a real-time system to deliver personalized stories and recommendations based on user emotions and gestures.
- Implemented emotion recognition with TensorFlow/Keras, gesture classification with scikit-learn, and created dashboards to track engagement trends.

Outcome: Tested with 30+ users, achieving ~83% accuracy in emotion recognition and ~94% gesture detection, enhancing personalized content delivery.

Tech stacks used: Python, OpenCV, MediaPipe, TensorFlow, Keras, scikit-learn, Pandas, Seaborn, Matplotlib, TextBlob, CSV, Pickle

ML-Powered and blockchain-secured payment simulation [\[link\]](#) Aug 2025 – Sep 2025

- Built a payment simulation system using blockchain, smart contracts, encryption; with scan intervals automatically adjusted based on threat risk.
- Implemented payroll system on Solidity and Ganache, added ML-based threat predictor, encrypted logs, and visualized system analytics.

Outcome: Tested 2,000+ payments, with ML-guided threat scans adjusting intervals from 50 to 150, improving system security and blockchain reliability.

Tech stacks used: Solidity, Truffle, Ganache, Python, Cryptography, Scikit-learn, Pandas, NumPy, Matplotlib, Seaborn, Pickle, JSON

TyreMonitor: AI-backed tyre health monitoring app for vehicles [\[link\]](#) Aug 2025 – Sep 2025

- Designed an Android app that collects and analyzes tyre data to accurately predict tyre health and assist users in planning timely maintenance.
- Built in Kotlin for Android, integrating a trained TensorFlow ML model (.tflite) for real-time on-device tyre health predictions and maintenance alerts.

Outcome: Flagged tyres as critical when confidence was below 0.70 and alerted users if confidence dropped below 0.40, enabling timely maintenance.

Tech stacks used: Kotlin, Android Studio, Python, TensorFlow, Scikit-learn, Pandas, NumPy, JSON

CustomSearchEngine [\[link\]](#) Jun 2025 – Jun 2025

- Created a C++ command-line search engine that finds relevant lines from multiple text files using keywords and fuzzy search.
- Used inverted indexing for fast lookup, TF-IDF for ranking, and built a custom fuzzy matching algorithm using Levenshtein distance.

Outcome: Tested on 25+ text files, retrieving relevant lines in under 0.5 seconds per query with ~97% accuracy in fuzzy word correction and ranking.

Tech stacks used: C++, Standard Template Library, File Handling, Unordered Maps/Vectors/Sets, TF-IDF, Levenshtein Distance, Command-Line Interface.

TRAINING

GeekForGeeks May 2024 – Jul 2024

- In-depth Understanding of Data Structures and Algorithms (DSA):** Developed strong foundation in DSA by learning core concepts such as arrays, linked lists. Progressed to advanced topics including dynamic programming, graph algorithms.
- Hands-on Problem Solving with Real-World Relevance:** Consistently practiced and solved a wide range of problems from company-specific coding sets, mock tests, and competitive programming platforms.
- Multi-language Proficiency with Industry-relevant Tech Stacks:** Gained hands-on experience in implementing DSA concepts using multiple programming languages including Python, C++, and Java.

CERTIFICATES

Solidity Advanced: Secure Smart Contracts & DApp Development – Packt	Aug 2025
Dynamic Programming, Greedy Algorithms – University of Colorado	Apr 2024
ChatGPT Advanced Data Analysis – Vanderbilt University	Jan 2024
Built AI Apps with ChatGPT, Dall-E, and GPT-4 – Scrimba	Jan 2024
Generative AI with Large Language Models – AWS and DeepLearning.AI	Jan 2024

EDUCATION

Lovely Professional University Bachelor of Technology - Computer Science and Engineering	Aug 2022 - Present Phagwara, Punjab
Samrat Public School Intermediate; Percentage: 93%	Apr 2020 – Mar 2021 Ajmer, Rajasthan
St. Anselm School Matriculation; Percentage: 94%	Apr 2018 – Mar 2019 Ajmer, Rajasthan
